

**Subject: STEEL SPECIFICATIONS FOR CONTRACT PAINTING**

Dear Customer,

We hereby inform you that for successful painting, galvanized steel substrates must meet specific characteristics.

Specifically, coils must be:

- **NOT passivated;**
- If the coils are passivated, indicate the quantities in mg/m<sup>2</sup>;
- NOT chrome-plated;
- lightly oiled;
- NOT dry;
- free of film-forming agents of any kind;
- free of dents;
- free of oxidation;
- free of zinc lumps;
- uniformly flat;
- NOT have any interposed paper
- NOT have any adhesive tape

This information is included in the quality certificates of the raw materials suppliers, so please forward these documents to our back office.

Based on this information, the coils' suitability for painting and the relevant pre-painting treatment will be assessed.

Please ALWAYS communicate the characteristics of the material sent for processing and remember that **Metpaint s.r.l. assumes no responsibility for quality in the event of metal painting that does not meet the above requirements.**
